Field report: the Rhône sensors

Page one of five: the dashed line is the page area's edge.

1. Where the sensors are

Forty-two stations along the river send a reading every ten minutes. The report below follows them from the lake to the sea, one section a page, so that the options that choose pages, sizes and margins show what they do.

> A coloured band and a tinted note: printed with `PrintBackground` on, left white without it.

Station	Kilometre	Level (m)

Genève	0	372.1
Seyssel	48	254.6
Lyon	232	162.3

2. The upper river

The upper river is fast and cold: its stations read the level every ten minutes and the temperature every hour.

Page three of five

3. Lyon

At Lyon the Saône joins: the station reads both rivers.

Page four of five

4. The lower river

Dams turn the lower river into a staircase of reaches.

Page five of five

5. The delta

In the Camargue the river splits in two before the sea.
